

Ionix makes any air line in your plant a static eliminator!

Faster plastic cleanup with less labor!

Sample installation of PL300-2 kit with hose and gun for hand blowoff

No equipment
modification
No nuclear or electrical
wiring
Rugged for shop floor
use
Makes perfect finish
when painting plastic

Install Ionix in any air line you need a static eliminator and the surface it blows on is static free! Ionix works automatically when air flows!

How Ionix eliminates static

Compressed air going through Ionix is made electrically dissipative. When that Ionix treated air is then blown onto a surface, the static charged surface and dust discharge through the Ionix air and static is gone!

Unique Proven Technology

The Ionix Static Eliminator utilizes a unique means of neutralizing static which has been recognized by the award of US Patent 5,402,304 by the US Patent Office. Over 50,000 sold since 1994.

Reliable, Safe, Automatic Operation

Simply install Ionix anywhere in the air line you want to act as a static eliminator and it works automatically when air passes through it. When exhausted, the Ionix can be disposed in normal waste and recycled with plastics. It contains NO hazardous or nuclear materials.

Easy to install

Anyone can install the Ionix Static Eliminator in less than 10 minutes. Simply cut the air line and hose clamp the hose ends over Ionix ends. No power supply or special positioning needed! Install one Ionix per machine air line or per hand blow off hose.

Ionix is unconditionally guaranteed!

Ionix unconditionally guarantees the Ionix Static Eliminator for 30 days. If you are unsatisfied, return the Ionix within 30 days for a full refund. Ionix is warranted for 6 months and replacement is recommended after 1 year.

Ionix plastic industry models

There are different Ionix models to eliminate the static charges characteristic on different surfaces and for different air pressures. Ionix are made for 3/8" ID air hose.

For use in air lines up to 50 psi (3.5 bar) use PL300-2.

For use in air lines up to 150 psi (9 bar) - HPPL300-2

Hand blowoff

Ionix can be installed in air hose or air gun for hand blowoff. If you need a hose and air gun, specify KIT after model number.

Plastics cleanup (up to 50 psi): PL300-2

Composite cleanup (up to 50 psi): Two model PL300-2 in series

The PL300-2 units are rated to 50 PSI.

For pressures over 50 PSI, use the HPPL300-2 rated to 150 PSI.

High pressure air lines (up to 150 PSI): HPPL300-2

Ionix is easy to install and use!

Install one Ionix at any location in one an air hose to treat the air for static elimination.

Do not leave or use Ionix in the air hose if the air hose is used for painting.

Optional 25" hose with 1/4" threaded ends and pistol grip air gun available.
